OVERVIEW

It is performed from start to finish under real-world scenarios like communication of the application with hardware, network, database and other applications.

Load and performance tests are essential to ensure that your software is able to handle a large mount of users. A high level of performance is a necessity. Poorly running systems can lead to significant consequences for any company. We simulates real user loads and measures performance

Automate your cross-browser testing by running tests on different famous browser types, versions, and operating systems. Take screenshots automatically across multiple browsers at once, comparing full page responsive layouts with ease.

END TO END TEST

login

Scenario	Duration (Seconds)	Action	Result	Screenshot (If failed)
test	2.0s	I am on page "http://demo2.bitcoco.ca/"	success	
	0.0s	I click "#sign_in_btn"	success	
	1.0s	I wait 1	success	
	0.0s	I click "#identifier"	success	
	0.0s	I fill field "#identifier", "Jiangqi"	success	
	0.0s	I click "#password"	success	
	0.0s	I fill field "#password", "123"	success	
	0.0s	I click "Get Started"	success	
	1.0s	I wait 1	success	
	0.0s	I click "#profile_dropdown"	success	
	3.0s	I click "//a[contains(text(),'Profile')]"	success	
	0.0s	I click "//div[@id='root']/div/div[2]/div/div/div/h3"	success	
	0.0s	I click "//div[@id='root']/div/div[2]/div/div/div/h3"	success	
	0.0s	I click "//div[@id='root']/div/div[2]/div/div/div/h3"	success	

	0.0s	I see "Personal Information"	success

LOAD TEST

The heatmap demonstrates that the connecting time of each request.

This graph indicates that the linear growth between the number of virtual users and testing time. During the load testing, the number of virtual users will reach 100 at the 60 second, 200 at the 120 second and 300 at 180 second.

TEST RESULT

- Time: 180s
- Max: 525ms
- P90: 525ms
- P99: 525ms
- MIN: 46ms
- AVERAGE: 60ms
- ERROR: 0
- TOTAL REQUEST COUNT: 18100

Overall, your website traffic handling capacity is around 100 per seconds in the most scenarios.
